Slide show, notes, etc. available @:

<http://toddgee.com/node/64>

(or will be later tonight)

Introducing the Drupal Scripts Library

- Philosophy / Best Practices
 - See <http://toddgee.com/node/31>
 - One Drupal installation per site!
 - Use a CVS-based install
 - Put all files related to a site under /sites/<sitename> (and use a consistent naming scheme!)
 - DB password same as 'user 1' password.

Introducing the Drupal Scripts Library

Quick overview of some notable scripts:

- drupalCVSDeploy.sh
 - A script to install drupal core and contrib modules/themes
- drupalUpdate.sh
 - Updates a Drupal instance on a temp domain (uses Drush)
- drupalSiteCopy.sh
 - Copies a site's state completely to a new domain name and db
- drupalManageLibraries.sh, drupalReport.sh, drupalDBQuery.sh, drupalAlias.sh
 - More good stuff!
- bashrc_drupal.sh, bash_completion.sh
 - Make it friendly

Off to bash

- Install new site using `drupalCVSDeploy.sh`
 - Install `cck/views`
 - Change version of same
 - Show off `drupalReport.sh` status
- Demonstrate template site copy using `drupalSiteCopy.sh`
- Demonstrate updating using `drupalUpdate.sh`
- More stuff (if time)
